

RISHI PATEL

Unity 3D Developer | Game Development | Firmware & Operating Systems

Email: rishivagadiya613@gmail.com | Phone: +91 6352294215

LinkedIn: [linkedin.com/in/rishivagadiya](https://www.linkedin.com/in/rishivagadiya) | GitHub: github.com/RishiVagadiya

Location: Ahmedabad, Gujarat, India

PROFESSIONAL SUMMARY

Motivated Unity 3D Developer with 1+ years of experience creating engaging 2D and 3D games for mobile and desktop platforms. Proficient in game mechanics optimization, performance enhancement, and delivering immersive experiences. Strong foundation in computer science fundamentals including operating systems and firmware. Proven ability to collaborate in cross-functional teams and drive projects from concept to deployment.

TECHNICAL SKILLS

Game Development: Unity 3D, C#, 2D/3D Game Design, Game Mechanics, Physics Engines, Animation, Shader Programming

Programming: C#, C++, Java, Python, SQL, Object-Oriented Programming, Data Structures & Algorithms

Tools: Unity Editor, Visual Studio, Git, GitHub, Version Control, Agile/Scrum, Performance Profiling

Additional: Firmware Development, Operating Systems, UI/UX Design, Asset Management, Problem Solving

PROFESSIONAL EXPERIENCE

infotechsrealm

Surat, Gujarat, India

Unity Game Developer - Remote

February 2026 – Present

- Developed 2D and 3D games for diverse clients in Unity and C#, owning the full lifecycle from prototype to release across casual, simulation, and arcade genres
- Implemented core gameplay mechanics and physics-based systems while optimizing performance to maintain a stable 60 FPS across Android, iOS, and WebGL builds
- Collaborated cross-functionally in an Agile workflow, translating client requirements into responsive UI and polished, on-spec deliverables within sprint deadlines
- Integrated third-party SDKs for ads, in-app purchases, and analytics while reducing build size and load times to improve retention on low-end devices

Virtual Filaments Private Limited

Ahmedabad, Gujarat, India

Unity 3D Programmer – OnSite

February 2025 – February 2026

- Develop, optimize, and deploy interactive 2D/3D and simulation-based educational applications using Unity Engine (C#)
- Collaborate with designers and the content team to create immersive learning experiences aligned with ICSE/CBSE curriculum
- Work with cross-functional teams to enhance performance, reduce load time, and ensure smooth multi-platform (Windows/Android/WebGL) builds from prototyping to final build
- Integrated third-party SDKs for analytics, monetization, and social connectivity, increasing revenue by 30%

ExoMatrix

Kolkata, West Bengal, India

3D Game Developer - Remote

July 2024 – February 2025

- Designed core gameplay features for action game including combat systems, inventory, and player progression mechanics
- Created responsive UI using Unity's UI toolkit, improving user engagement by 25% based on playtesting feedback
- Developed custom shaders and visual effects to enhance aesthetics while maintaining optimal frame rates
- Debugged and resolved critical production issues, reducing crash rates by 60% through systematic testing

EDUCATION

Sssdiit

Junagadh, Gujarat, India

Bachelor of Computer Applications (BCA)

Graduation: 2024

- Relevant Coursework: Data Structures, OOP, DBMS, Operating Systems, Software Engineering, Computer Networks

KEY PROJECTS

– Car Parking Game App

Description : A realistic car driving and parking simulator built in Unity, where players steer vehicles through multi-level courses to reach designated parking spots while avoiding obstacles. Vehicle handling is driven by Unity physics using Rigidbody and WheelColliders under gravity, delivering believable acceleration, braking, steering, and momentum. The game features responsive touch and keyboard controls, a smooth follow camera, and progressively challenging parking levels.

Game Link : https://drive.google.com/file/d/1SqxuLnHbptwo_k8aCAzDNVuBkV7z61/view?usp=drivesdk

– Hyper Crowded Color (Game)

Description : A 3D running game where players solve math questions while running (e.g., 'What is 2+2?'). The game consists of 5 levels, all created within a single scene using Empty GameObjects. Unity Ads are displayed after each level completion.

Game Link : <https://drive.google.com/file/d/13oiid8qWvXb2e8iPC3sSCjXkrtbv-KPP/view?usp=sharing>

– Zombie Kill Game 3D

Description : A 3D action game where the player attacks enemies. When the player gets close, enemies start chasing and attacking. Designed the complete environment and implemented enemy AI behavior.

Game Link : https://drive.google.com/file/d/1ePns9H9h8htrAnfnYsxh1q-Z_slxlfbn/view?usp=sharing

-- Panic At The Pond

Description : Built a real-time multiplayer game in Unity/C# supporting LAN matchmaking via the **Mirror** framework and online play via **Photon (PUN)**. Authored gameplay systems including network-synchronized character state machines (FishController), automated pathfinding (GoldenFishAI), and a persistence layer for in-game shops (ShopManager). Programmed a dynamic asset-loading solution inside CustomNetworkManager to resolve network instantiation errors and optimize late-joiner synchronization.
